Sample Multiple-Choice Questions in Toxicology with Answers and Explanations

Below are some representative MCQs frequently encountered in toxicology exams, along with detailed explanations.

1. Which of the following is the most common antidote used in acetaminophen poisoning?

- A) Atropine
- B) N-acetylcysteine
- C) Pralidoxime
- D) Activated charcoal

Answer: B) N-acetylcysteine

Explanation:

N-acetylcysteine (NAC) acts as a glutathione precursor, helping detoxify the harmful metabolite NAPQI responsible for acetaminophen-induced hepatotoxicity. It is the main antidote administered in cases of acetaminophen overdose, especially when initiated early.

2. Which organ is primarily affected in chronic lead poisoning?

- A) Heart
- B) Kidneys
- C) Liver
- D) Lungs

Answer: B) Kidneys

Explanation:

Chronic lead poisoning predominantly affects the kidneys, leading to nephropathy characterized by interstitial fibrosis and renal impairment. Lead also affects the hematopoietic system and nervous system, but renal toxicity is significant in chronic cases.

3. Which of the following substances is classified as a heavy metal toxin?

- A) Cyanide
- B) Arsenic
- C) Ethanol
- D) Carbon monoxide

Answer: B) Arsenic

Explanation:

Arsenic is a heavy metal toxin known for its carcinogenic potential and widespread environmental presence. Cyanide and carbon monoxide are cyanogenic and gaseous poisons, respectively, while ethanol is a CNS depressant but not a heavy metal.

4. The mechanism of toxicity of organophosphates primarily involves inhibition of:

- A) Monoamine oxidase
- B) Acetylcholinesterase
- C) Cytochrome P450 enzymes
- D) Glutathione S-transferase

Answer: B) Acetylcholinesterase

Explanation:

Organophosphates inhibit acetylcholinesterase, leading to accumulation of acetylcholine at synapses, causing cholinergic overstimulation. This results in symptoms like salivation, lacrimation, urination, diarrhea, gastrointestinal distress, and emesis (SLUDGE).

5. The classic triad of arsenic poisoning includes:

- A) Headache, fever, cough
- B) Gingival pigmentation, Mee?s lines, anemia
- C) Jaundice, abdominal pain, vomiting
- D) Rash, fever, lymphadenopathy

Answer: B) Gingival pigmentation, Mee?s lines, anemia

Explanation:

Chronic arsenic poisoning often presents with characteristic features such as hyperpigmentation (especially on the palms and soles), Mee?s lines (white transverse lines on nails), and anemia. These signs are helpful in clinical diagnosis.
